CLASH OF THE CLAWS

RVCE Cortex

One Context Layer. Every AI. Zero Re-explanation.

Monika K N | Priyanka S | Pavan R | Nandish K L

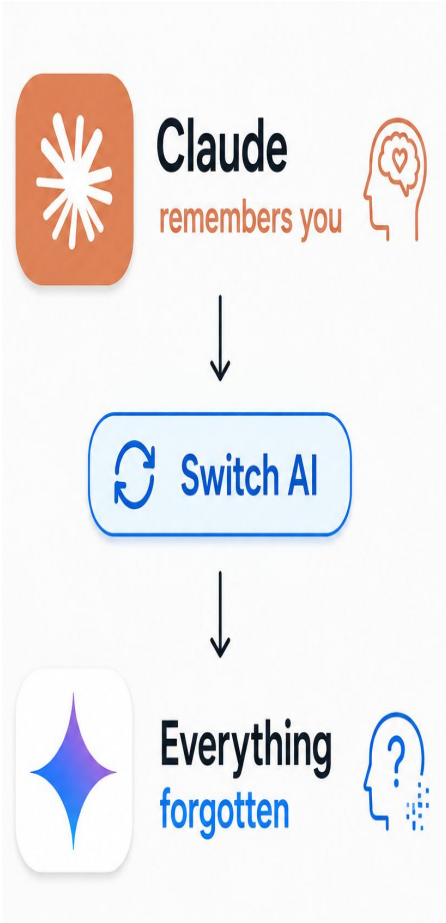
Problem Statement

Why Theme 3 — Productivity Platforms:
→ Every knowledge worker uses 3+ AI tools daily
→ Switching tools = starting from zero every time
→ 30-60 mins wasted daily on re-explanation

Who Faces It:
→ Developers | Researchers | Students | Managers

The Core Problem:
→ Claude knows you. ChatGPT doesn't.
→ Your context dies at every AI border.
→ Nobody is solving this at system level.

Why It Matters:
→ Problem gets worse as more AI tools enter market
→ No existing tool works across ALL platforms



Current Solution & Gaps

Existing Solutions & Why They Fail:

1. ChatGPT Memory → Works only inside ChatGPT
2. Claude Memory → Works only inside Claude
3. Mem.ai → Notes tool, not AI-session aware
4. Rewind AI → Screen recorder, privacy risk
5. Notion AI→ Locked inside Notion only

What's Missing:

→ No cross-platform context layer exists

→ No local-first privacy-safe solution

→ No portable AI identity passport

→ No selective context injection exists

The Gap = Our Opportunity

Your Solutions

CORTEX — Universal AI Context Passport

1. Context Extraction Engine

- OpenClaw daemon extracts signals from your AI conversations every 10 minutes via HEARTBEAT.md

2. Visual Knowledge Graph

- Local dashboard — see what each AI knows about you .
- Real conversations linked to extracted facts .

3. Injection Preview Overlay

- Review, edit or remove context snippets before they hit the AI. Full control.

4. Context Will

- Export your AI identity as a portable JSON passport

5. Context Injector

- Silent briefing injected before your first message on any AI platform.
- Zero re-explanation.

Idea

Demo/Product Walkthrough

The 4 Wow Moments:

1. Context Injection
   - Switch from Claude → ChatGPT
   - Chat GPT already knows who you are

2. Injection Preview
   - See exactly what gets injected
   - Edit it. Remove what's irrelevant.
   - Then confirm. Surgical precision.

3 . Context Will Export
   - Full AI identity exported as JSON
   - Imported instantly into new platform

Tech & Architecture

Tech Stack:

- Frontend → React.js + Vite + D3.js
- Backend → Node.js + TypeScript
- Storage → MongoDB + Local YAML/Markdown
- Extension → Chrome Manifest V3
- Agent → OpenClaw Framework
- CSP bypass via Background Service Worker
- Shadow DOM support for Claude.ai
- soul.yaml live identity sync

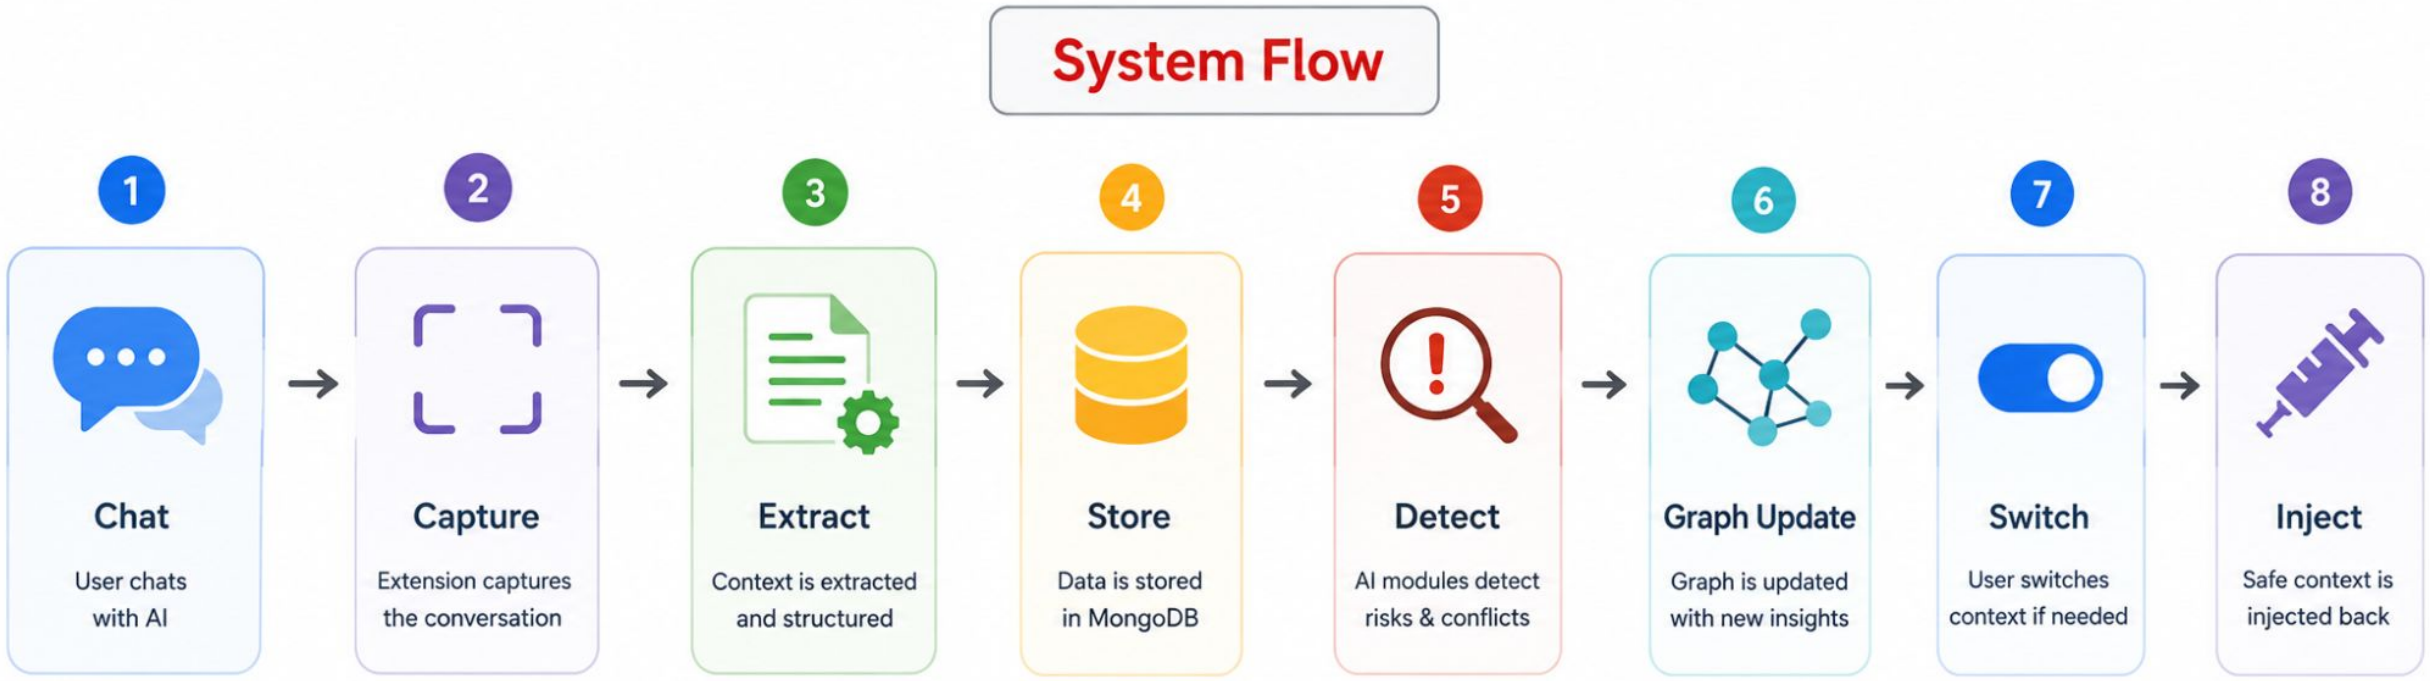
AI Usage:

→ Anthropic Claude API — context reasoning & extraction

→ 6 Custom SKILL.md files written from scratch:

- Context-extractor
- Conflict-detector
- Context-injector
- Memory-writer
- Poisoning-detector
- Persona-drift-detector

Tech & Architecture



Impact & Use cases

Real Life Scenarios:

- The Developer — Pavan
  Uses Claude + ChatGPT + Gemini daily
  Re-explains stack 3 times a day
  CORTEX → Zero re-explanation.
  Saves 45 min/day

- The Researcher — Monika
  Perplexity for search. Claude for writing.
  Manually selects relevant research context
  Injects only what matters into each session
  All data stays on her laptop.

- The Manager — Priyanka
  Team moves from Jira to Linear
  Updates ONE fact in CORTEX
  All 3 AI tools updated automatically

- The Student — Nandish
  Different AIs for different subjects
  Opens dashboard → Health score 87/100
  2 stale memories fixed in 30 seconds

Scale Potential:

→ 500M+ knowledge workers globally
→ Problem grows with every new AI tool launched

Differentiation

- **Why CORTEX Stands Out:**

Every existing tool is built INSIDE one AI.
CORTEX is built BETWEEN all AIs.

>> MOAT 1 — Injection Preview & Selective Control
→ You see exactly what gets injected before it fires
→ Edit, remove, or confirm each snippet
→ No tool gives you this level of transparency
→ Your context. Your choice. Every time.

>>MOAT 2 — Local-First, Vendor-Agnostic
→ 100% on your machine. Zero cloud dependency.
→ Works with ANY AI — today and tomorrow
→ Swap LLM without losing a single memory
→ Zero privacy risk. Zero lock-in. Zero cost.

One Line:

- Every AI has memory.
- CORTEX makes all of them remember the same person.
- CORTEX becomes more valuable as users adopt more AI tools

Demo Link

GitHub Repository:
github.com/pavanpavan1138h-cpu/cortex

Quick Run

```
git clone github.com/pavanpavan1138h-cpu/cortex
npm install
npm start
```

Supported Platforms

- ChatGPT
- Claude
- Gemini
- Copilot

Frontend

```
cd cortex-dashboard
npm run dev
```

Backend

```
npm run dev
```

Brownie Slide

- **Beyond The Tech — Why This Matters**

→CORTEX doesn't compete with any AI tool.

→It makes every AI tool better simultaneously.

- **By The Numbers:**

→ 6 custom OpenClaw SKILL.md files

→ 8 end-to-end test suites

→ 20 conversation evaluation samples

→ 3 KPIs tracked live

→ 4 AI platforms supported

→ 100% local core — zero cloud needed

- **What's Next:**

→ Firefox extension

→ Mobile companion app

→ Team shared context vaults

→ Custom extractor marketplace
